

Measuring Length with Tools

Today's Standard

2.MD.A1 - Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.

Cues	Notes
What tools can be used to measure length?	Rulers, yardsticks, meter sticks, and measuring tapes are tools used to measure length.
What is the importance of starting from the zero mark?	Starting from the zero mark ensures accurate measurement.
How do different units affect measurement?	Different units (inches, centimeters) can give different numerical values for the same length.

Summary

To measure length accurately, use tools like rulers and start from the zero mark. Different units can give different measurements for the same object.
