

## Object Counting and Pairing

### Today's Standard

K.CC.B4a - When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.

Cues	Notes
What is counting?	Counting involves saying number names in sequence.
Why is order important in counting?	Order is important because it ensures each object is counted once.
What is one-to-one correspondence?	One-to-one correspondence means each object gets a unique number name.
How can we practice counting?	Practice counting with objects like toys, steps, or fruits.
What are common mistakes in counting?	Common mistakes include skipping numbers or giving the same number to multiple objects.

### Summary

Counting requires saying number names in sequence and pairing each object with a unique number name. Practicing with real objects helps reinforce these concepts.
