Categorizing Common Objects

Today's Standard

K.L.5a - Sort common objects into categories (e.g., shapes, foods) to gain a sense of the concepts the categories represent.

Cues	Notes
What is categorization?	Categorization is the process of grouping objects based on shared characteristics.
Why is sorting objects important?	Sorting objects helps students understand and describe the world around them.
Can objects belong to multiple categories?	Yes, objects can belong to multiple categories based on different characteristics.
How can we create our own categories?	We can create categories based on any criteria we choose, such as color, type, or size.
What are some real-world examples of categorization?	Examples include sorting toys, groceries, and laundry.

Summary

Categorization involves grouping objects based on shared characteristics. This skill helps students describe and understand their environment. Objects can belong to multiple categories, and students can create their own categories based on various criteria.
