

Addition and Subtraction Word Problems

Today's Standard

1.OA.A1 - Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.

Real-World Applications for this Standard

Adding and subtracting items during shopping; Counting and comparing toys; Sharing snacks among friends; Solving puzzles with missing pieces; Using play money for transactions

Today I Learned

Today, we learned how to solve word problems using addition and subtraction up to 20. We used objects, drawings, and equations to find answers.

Common Stumbling Blocks

Sometimes kids think that the order of numbers in subtraction doesn't matter, but it does. They might also think subtraction always makes numbers smaller, which isn't always true.

Quiz Me

- What does $5 + 3$ equal?
- If you have 10 apples and give away 4, how many do you have left?
- What number do you get if you add 7 and 2?
- How many more is 9 than 6?
- If you take 2 away from 8, what is left?

Help Me

We use addition and subtraction in real life, like when we share snacks or count toys. Solving these problems helps us understand numbers better.
