

Addition and Subtraction within 100

Today's Standard

2.NBT.B5 - Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.

Real-World Applications for this Standard

Calculating change when shopping; Determining the total number of objects in two groups; Figuring out how many more items are needed to reach 100; Solving simple word problems involving sums and differences

Today I Learned

Today, we learned how to add and subtract numbers up to 100. We used different strategies like place value and understanding how addition and subtraction are related.

Common Stumbling Blocks

Sometimes, kids think they always need to regroup when adding or subtracting, which isn't true. Another tricky part is remembering the right order to do things in multi-step problems.

Quiz Me

- What is $45 + 32$?
- How do you find the difference between 78 and 23?
- Can you add 56 and 14 without regrouping?
- What is a quick way to add 10 to any number?
- How do you know when to regroup in subtraction?

Help Me

Adding and subtracting up to 100 helps us in real life, like when we figure out how much money we have after buying something or how many more toys we need to have 100. It's all about using numbers to solve everyday problems!
