

## Integrating Multiple Information Sources

### Today's Standard

6.RI.7 - Integrate information presented in different media or formats (e.g., visually, quantitatively) as well as in words to develop a coherent understanding of a topic or issue.

### Real-World Applications for this Standard

Analyzing news articles and infographics to understand current events; Combining data from charts and written reports in science projects; Using maps and written descriptions to learn about historical events

### Today I Learned

Today, we learned how to combine information from different sources like texts, pictures, and charts to understand a topic better.

### Common Stumbling Blocks

Some kids might think pictures or numbers are not as important as words. Others might have trouble seeing how all the information fits together. We help them by showing how everything connects.

### Quiz Me

- What is the main idea?
- What does this picture show?
- How do these numbers help us understand the topic?
- Can you explain how this chart and text are related?
- Why is it important to look at different types of information?

### Help Me

When we look at different types of information like words, pictures, and numbers, it helps us understand things better. For example, reading about a science experiment is good, but seeing a chart of the results makes it even clearer.
