

## Using Multimedia in Presentations

### Today's Standard

6.SL.5 - Include multimedia components (e.g., graphics, images, music, sound) and visual displays in presentations to clarify information.

### Real-World Applications for this Standard

Creating a slideshow with images and audio for a school project; Incorporating video clips in a book report presentation; Designing an infographic to summarize research findings; Using background music to enhance a storytelling session; Adding sound effects to a historical reenactment presentation

### Today I Learned

Today, we learned how to use pictures, sounds, and videos in our presentations to make them clearer and more interesting.

### Common Stumbling Blocks

Sometimes, kids think that adding a lot of pictures and sounds makes their presentation better, but it can actually be confusing. Also, some kids think these things are just for decoration, but they should help explain the main ideas.

### Quiz Me

- What can you use to make your presentation clearer?
- How can pictures help in a presentation?
- Why should you add sounds to your presentation?
- Is it good to use too many videos in your presentation?
- What should you think about when adding music to a presentation?

### Help Me

When you make a presentation, you can use pictures, sounds, and videos to help explain your ideas. For example, you can show a picture to help people understand your story better or add music to make your presentation more fun.
