

## Effective Multimedia Presentations

### Today's Standard

7.SL.5 - Include multimedia components and visual displays in presentations to clarify claims and findings and emphasize salient points.

### Real-World Applications for this Standard

Creating a PowerPoint presentation for a school project; Using charts and graphs in a science fair presentation; Incorporating videos and images in a history report; Designing infographics to summarize research findings; Using animations to explain a complex concept in a class discussion

### Today I Learned

Today, we learned how to use pictures, videos, and other cool stuff to make our presentations better. This helps us explain our ideas more clearly and makes our presentations more interesting.

### Common Stumbling Blocks

Sometimes, kids think that just adding any picture or video will make their presentation better. But that's not true. It's important to choose the right pictures and videos that really help explain what you're talking about. Also, using too many pictures and videos can be confusing.

### Quiz Me

- What can you use to make your presentation better?
- Why is it important to choose good pictures and videos?
- What can happen if you use too many pictures and videos?
- How do pictures and videos help your presentation?
- Can any picture or video make your presentation better?

### Help Me

Using pictures, videos, and other fun things in your presentation can help explain your ideas better. For example, if you're talking about animals, you can show pictures or videos of the animals. This makes it easier for people to understand what you're talking about and keeps them interested.
