

## Analyzing Data in Texts

### Today's Standard

9-10.RH.7 - Integrate quantitative or technical analysis (e.g., charts, research data) with qualitative analysis in print or digital text.

### Real-World Applications for this Standard

Comparing statistical data in historical contexts; Analyzing charts and graphs in social studies texts; Integrating research data with narrative accounts; Evaluating technical reports alongside qualitative descriptions; Using digital tools to combine quantitative and qualitative information

### Today I Learned

Today, we learned how to look at numbers and stories together to understand better. This helps us see the whole picture.

### Common Stumbling Blocks

Some kids might think numbers and stories can't be used together. Others might think numbers are always better than stories. Both are important!

### Quiz Me

- What is a chart?
- What is a story?
- Can we use numbers and stories together?
- Why is it good to use both numbers and stories?
- Which is better, numbers or stories?

### Help Me

We learned that using numbers and stories together helps us understand things better. For example, looking at a chart about how many people like ice cream and reading a story about why they like it gives us more information.
