

## Data Report Evaluation

### Today's Standard

HSS.IC.B6 - Evaluate reports based on data.

### Real-World Applications for this Standard

Analyzing news articles for statistical accuracy; Evaluating scientific research studies; Interpreting business performance reports; Assessing political polls; Critiquing health and medical studies

### Today I Learned

Today, we learned how to check if reports based on data are true and not misleading.

### Common Stumbling Blocks

Sometimes, kids think all data is true or that if two things happen together, one caused the other. We teach them to look closer to see if that's really the case.

### Quiz Me

- What is a data report?
- Why is it important to check data?
- Can all data be trusted?
- What does it mean if two things happen together?
- How can we check if data is true?

### Help Me

Evaluating data reports means looking closely at the information to make sure it is true and not misleading. This helps us make better decisions in real life, like understanding news stories or choosing the best products.
