

Number Writing and Representation

Today's Standard

K.CC.A3 - Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Real-World Applications for this Standard

Counting objects in a classroom; Labeling quantities in a grocery store; Writing numbers on a birthday card; Counting steps while walking; Creating number-based art projects

Today I Learned

Today, I learned how to write numbers from 0 to 20 and use these numbers to show how many objects there are.

Common Stumbling Blocks

Sometimes, kids think that 0 means something is there, but it actually means nothing is there. Also, they might write numbers backwards or in the wrong order.

Quiz Me

- Can you write the number 5?
- What does the number 0 mean?
- How many apples are there if you write the number 3?
- Can you count to 10?
- What number comes after 7?

Help Me

Writing numbers helps us count things in the real world, like counting toys, steps, or even how many friends are at a party.
