

Comparing Written Numerals

Today's Standard

K.CC.C7 - Compare two numbers between 1 and 10 presented as written numerals.

Real-World Applications for this Standard

Comparing the number of apples in two baskets; Determining which group of toys has more items; Comparing scores in a simple game; Identifying which of two written prices is higher; Comparing the number of steps taken by two people

Today I Learned

Today, we learned how to compare two numbers between 1 and 10 when they are written down. This helps us understand which number is bigger or smaller.

Common Stumbling Blocks

Sometimes, kids think that a number with more digits is bigger, like thinking 10 is bigger than 2. They might also mix up the order of numbers, thinking 3 is bigger than 5.

Quiz Me

- Which is bigger, 4 or 7?
- Is 2 smaller than 5?
- Which number comes first, 3 or 6?
- Is 9 bigger than 1?
- Which is smaller, 8 or 10?

Help Me

We compare numbers in the real world all the time! Like when we see which price is higher, or who has more toys. This helps us understand and make decisions.
